

The effects of Exceed / Mybeau on the digestibility of a working dog diet

TESTING

Trial undertaken by:

Dr Dave Thomas
Acting Director
Centre for Feline Nutrition
Institute of Food, Nutrition and
Human Health
Massey University
Palmerston North NZ

Conclusion:

The addition of Exceed / MyBeau to a dry dog food that had passed a minimum feeding protocol for providing an adult maintenance claim (AAFCO, 2004) resulted in an increase in the apparent faecal digestibility of dry matter. No changes were observed when Exceed / MyBeau was added to the dog food on crude protein and energy digestibility.

The addition of Exceed / MyBeau to a dry dog food reduced the amount of faeces produced by the dogs.

These results are very similar to, and further support, the findings of a previous digestibility study carried out using MyBeau and another AAFCO approved maintenance dry dog food which demonstrated a significant increase in the apparent faecal digestibility of dry matter and energy.
